DETAILED ACTION

Priority

Applicant is advised that a copy of the certified copy of the priority document has not

been received from the International Bureau.

If applicant has not forwarded a certified copy of the priority application in time for the

International Bureau to forward it to the U.S. Designated Office with the copy of the international

application, then applicant will have to provide a certified copy of the priority document during

the national stage to fulfill the requirement of 37 CFR 1.55(a)(2). MPEP § 1893.03(c).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly

claiming the subject matter which the applicant regards as his invention.

Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for

failing to particularly point out and distinctly claim the subject matter which applicant regards as

the invention. In claim 1, lines 14-15, and claim 8, line 15, it is not clear what the limitation "the

engine idle rotation state" is intended to refer to since it has insufficient antecedent basis in

the claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

راب

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimasaki et al (US 6,019,183) in view of Yamaguchi et al (US 5,865,263). Shimasaki et al discloses the claimed invention except for the control of torque absorption by a motor generator. The control system of Shimasaki et al includes an engine 1, transmission 4, motor/generator 2 and a controller 27, which controls automatic stopping and restarting of the engine. When the accelerator is pressed, the vehicle starts from either an engine idling state (column 10, line 66, to column 11, line 51) or an engine stop state with subsequent engine starting (column 13. lines 53, to column 14, line 27). Yamaguchi et al teaches that it is known to cancel torque fluctuations due to engine starting when a hybrid vehicle is started from an engine stop state by using a motor/generator to absorb torque (column 1, lines 25-55, and column 9, lines 1-12). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the control system of Shimasaki et al so as to control the motor/generator to cancel torque fluctuations due to engine starting when the vehicle is started from an engine stop state by absorbing torque, as taught by Yamaguchi et al, in order to provide smooth vehicle starting. The cancellation of torque inherently provides the same effective torque for vehicle starting from an engine stop state as from an engine idling state.

Allowable Subject Matter

Claims 2-7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Art Unit: 3747

Response to Arguments

Applicant's arguments with respect to claims 1 and 8 have been considered but are moot

in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Andrew M. Dolinar whose telephone number is (703) 308-1948. The

examiner can normally be reached on Mon. - Thu. 7:45 - 6:15.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Henry Yuen can be reached on (703) 308-1946. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
